YS08 Human-Computer Interaction 2024-2025
Project: Exercise 3 (A3)

Implementation of a new portal “Neighborhood Nannies”

In A3 of the project you will implement the interface of the website you designed as a storyboard in A2. Specifically, you are asked to implement the following:

- The home page.
- Information about the procedure/s that each user group must follow, the operation of the website’s services and any other information you consider necessary, in whatever way you consider appropriate. Your application should provide **personalized information**, i.e., the content should adapt to the user who is logged in.

For **parents/guardians**:

- Information about the eligibility criteria, the procedure they must follow, the operation of the platform and any other information you consider necessary.
- Search for professionals (“nannies”) based on various criteria, (e.g., area of residence, age of the child, employment type (full/part-time)), time specification (e.g., specific days of the week, specific hours, etc.), profile (e.g., specialization, studies, experience) and characteristics (e.g., employment availability) of the professionals they are looking for, and other criteria at your discretion.
- Display of search results and details for each professional, in whatever way you consider most appropriate.
- Scheduling of a meet-and-greet appointment (online/in person) with professional/s of their interest.
- Application expressing interest in cooperating with a professional. Each declaration can be:
  - either in a temporarily saved (draft) state where the user can still edit their declaration before submitting it or until the deadline for declarations expires (if there is one)
  - or in a state of final submission where they will be able to view (preview) the details they have declared but will not be able to edit them.
- “Signing” of a private cooperation agreement with a professional through the interface.
- Payment of the professional:
  - Certification of completion of the month’s work (this should be done for every month of work that is completed).
  - Automatic display of the appropriate digital voucher for the payment in the interface of the professional.
  - Confirmation of receipt of the voucher by the professional.

- End of cooperation:
  - Confirmation of completion of the agreed cooperation.
  - Possibility of renewing the agreement.
  - Evaluation/review of the professional.
- Viewing of the “history” of declarations, agreements, payments, etc.

For the **professionals (nannies)**:

- information about the eligibility criteria, the procedure they must follow in order to register for the service, the operation of the platform and any other information you consider necessary.
- Creation of a CV that includes full name, age, gender, level of education, experience and references, if any (they should be given the option to upload recommendation letters as well).
- Creation of an “ad” that will include information such as availability, employment type (full/ part-time), work location, and anything else you consider necessary. The ad can be:
  - either in a temporarily saved (draft) state where the user can still edit the details before submitting it
  - or in a state of final submission where they will be able to view (preview) the details they have submitted but will not be able to edit them.
- Monitoring of appointment scheduling.
- “Signing” of a private cooperation agreement with a parent through the interface.
- Receipt of voucher and confirmation to the parent.
- Viewing of the “history” of applications, agreements, payments, etc.
- Viewing of the evaluations that have been submitted.

For **everyone**:

- Possibility of editing the profile for the users who have logged in.

Restrictions/checks/assumptions:

- Multiple meet-and-greet appointments are allowed but only one employment agreement at any given time. That is, if a professional is employed either part-time or full-time in a household they are not allowed to cooperate with another before the end of the scheduled period.
- We assume that one professional corresponds to each child and that only one professional can be employed per household.

Basic implementation guidelines:

The implementation can be done in **React**, as we showed in the tutorial, or with any other **JavaScript web framework**. Additionally, you can use Material UI or any framework that belongs to the family of Material Design frameworks for creating the interface of your application. **ATTENTION**: Projects done exclusively in HTML will not be accepted.

For the storage, e.g., of the users' details etc., you will use a **Database** (DB), either in the way we showed in the tutorial or in any other way you wish. The DB will be indicative in terms of the number of records, e.g. you do not need to have a table with 100 users. **ATTENTION**: Using only state variables or session variables for data storage is not sufficient for the maximum grade.

Practical guidelines and deliverables:

- For A3, you will keep the teams you formed in the previous Exercise of the project. The same person will be responsible for submitting the exercise on e-Class.
- The deliverable of Exercise 3 will be a **compressed file** which will have as its **name the student ID (AM) of the person responsible for each team** (for example sdixxxxxxx.zip). The file will include:
  - A text file **readme.txt** with the names of your team members, a brief report on what you have implemented and test credentials you used for testing the login as well as the link to the **private** repository on **github** with the program's code. The repository with your code can be made public if you wish after the announcement of the final grade of the project.
  - A folder with the project code on eclass in zip format (ATTENTION, you will submit only the src folder or whichever other folders contain files of the application, e.g. the public folder, and not the whole project folder with the individual packages you may have installed, that is you do not need to submit the node_modules folder or the other folders that create-react-app creates).
- During the oral examination of your projects you may need to add the instructors and the assistants of the course as members (**invite collaborator**) to the private repository of your project, with the corresponding permissions.
- Submission is done ONLY via eclass.uoa.gr. Projects sent in any other way (e.g. by email) will NOT be accepted. **Attention**: The submission of projects on e-Class locks automatically once the submission deadline has passed.

Submission deadline: **19 January 2025, at 23:55**
